

SHOWRUNNER System Requirements

Hardware

Manager Computer

If you are using SHOWRUNNER for running the show or for logical-command editing, you can install on almost any Windows 7/8/10 computer.

If using SHOWRUNNER for timeline editing, you will need a computer that will support your media files.

Display Computers

As a minimum, we recommend a PC configuration that has a compatible RAM / CPU chipset combination, ideally assembled around a fast Intel processor and a graphics card supporting the latest DirectX and Direct3D.

If you are planning to build a multi-display server, use latest generation 4/6 core i7 processor with at least 16 GB RAM and SSD hard drives.

For best results and reliability, professional graphics cards are recommended:

AMD Pro – Radeon WX7100/9100

NVidia – Quadro P4000/P5000/P6000

High end gaming cards are also recommended:

NVidia GTX 1070/1080

More than one graphic card can be used (up to 10 displays) in one computer, in this case, take care the motherboard can handle the throughput on the PCIe bus.

Please take care, with multi-display servers, EDID has to be stable between displays and graphics card. For best results, it is recommended to use EDID emulators.

Every digital media network will have different technical requirements and the type and format of the media and number of layers and effects used, will determine the type of PC and graphics chipset to deploy.

The hardware specifications in this document should only be used as a guideline. We recommended that you thoroughly test any combination of PC, graphic card, screen and media before purchasing.
